(54) Title: **WASTE STORAGE DEVICE**

(57) Abstract: A waste storage device includes a container (21) in which a cassette (1) is mounted. Tubing (2) is pulled through the centre of the cassette (1) to store packages (35) separated by twists. The cassette (1) is rotated relative to the container (21) to provide the twists between packages (35) by virtue of a rotatable disk (100) and user grip portion (102). The package is gripped against rotation by a gripper diaphragm (120) and is guided towards a wall of the container by a guide diaphragm (122) to prevent untwisting between packages.
